

## WORLD LIGHTHOUSE ON THE AIR - WLOTA

### Information

N° 13 – November, 2008

Our manager Phil commented on me it does so that in this year 2008 the numbers of validations have raised even 105 and still they stay several months by the end of the year, a record has been beaten. In the year 2007 60 activations were validated. The validations are a fundamental element to give seriousness to our diploma and this has your effect on since as the same one is valued by all the Hams. We are in the good way, Phil has done well his work, WLOTA goes way of being the most valued diploma of lighthouses of the world. This information does that the whole WLOTA HQ, we are thinking about new ideas, new trophies and lines of work. In the next bulletins we will inform all our friends. Help us and support WLOTA!!!!

Arsen Luis – EA8AY  
WLOTA President

#### **WLOTA Validation expeditions:**

Validations during the month of September 2008 are on web site and October 2008 in a few days.

## Good expedition to these Oms...

### OPERATIONS FROM WHICH VALIDATION MATERIAL ARE AWAITED:

1860	AB5EB/P	September 2008
0322	9A1C/P	September 2008
1119	9A1C/P	September 2008
1492	9A1C/P	September 2008

### Messages receive from WLOTA Expeditionary:

#### From IZ1GAR for WLOTA 2312:

*Yes Om please informs your wlotamembers that I am very happy to give my help in the ww contest cw 2008. I am on 40 meters band with call IG9W. Also my friend IG9X on 80 meters ready for you in the ww contest cw. tks for info 73 and good dx. Ok tks for info. I am at about 500 meters from lighthouse of lampedusa. I print on my qsl also wlotam.*

*Emilio iz1gar-IG9W Sanremo Italy*

#### From OH2YL for WLOTA 1113:

*Thanks from your good news. I will use WOLTA 1113 in my QSL-card. It is honor for me. Have a nice week to you and see you on band!*

*73 de Anne, OH2YL*

#### From IW9GUR WLOTA 1005:

*Hi dear OM, we will be very close to the lighthouse north side of saline (300 meters) and will be for us a real pleasure to include in our QSL card reference WLOTA 1005.*

*Thanks for your information and see you on air best 73 de IW9GUR David*

#### From IW9HLM WLOTA 1005:

*Hello, we have accepted your request. You expect on air.*

*Info: <http://www.095dxteam.org/homenew.shtml>*

*73, De Angelo IW9HLM*

## EE8AY - Alegranza Island Expedition – 22 to 25 August 2008

### All pictures: EA8AY

22 to 25 of last August I made **WLOTA's activation 0129**, the Faro of Punta Delgada, in Alegranza's island, to the north of Lanzarote's island. Alegranza is a very small island, only 10 square km, where they live more than 40000 birds, Pardelas. Zone of difficult access to the being Reserva Natural. The indicative one was EE8AY. To the island it comes near by ship small from Lanzarote's north, they are approximately two hours of ship, if to be able to be in the island they need authorization of Lanzarote's Authorities without it one cannot accede it to the island. The strong wind flogged the qth quite the days and I had another problem could not mount my spiderbeam, the multitude of birds that live in the island they were making my antenna very dangerous for his flight. ULTIMATELY only a vertical antenna uses multiband. Final result more than 650 qso, s with only 100w. The conditions of propagation were very poor, only I had conditions approximately four daily hours, this reduced very much the number of qso, s but there were good pile ups from Alegranza. The experience was marvellous, the island is deserted, only some scientists are several months a year. The Punta Delgada LH is totally left, the wind and the sea are destroying it little by little, and it is a shame.

Here you realize that another important mission of all of us is to report of the condition of the LH, the authorities must take care of them, are an alive history. In this activation I had support of several official organisms the web page ([www.isladealegranza.ea8ay.com](http://www.isladealegranza.ea8ay.com)) has received more than 1500 visits.

Thanks to all the friends for your patience and I hope that Punta Delgada LH is arranged and improved in order that it does not get lost definitively.
